Work Experience

Full Stack Developer, Vancouver Bitcoin

May 2022 - Present | Vancouver, Canada

- Developed 30+ Vue.js components to streamline company-wide internal operations.
- Managed DevOps CI/CD Pipelines with 100+ deployments per month using Node.js on AWS.
- Integrated a NoSQL database to support new crypto currency transaction reporting for federal audits, resulting in over 1,000 reports generated.
- Automated customer registration with REST API endpoints and AWS Lambda for webhook integration with third-party vendors.
- Collaborated with the project manager to enhance the onboarding experience, improving document verification and reducing high-risk sign-ups.

Technologies: TypeScript, JavaScript, Node.js, Vue.js, MongoDB, AWS

Full Stack Developer (Contract), App Growth Network

Jan 2022 - Apr 2022 | Vancouver, Canada

- Designed and developed a webdashboard application for smartphone's application marketing management, collaborating with cross-functional teams such as data scientists to align on requirements.
- Implemented user authentication features, including JWT-based sessions and two-factor authentication (2FA), for enhanced security.

Technologies: TypeScript, JavaScript, Node.js, React.js, DynamoDB, AWS Lambda

Full Stack Developer, Casareal

Mar 2018 - Feb 2021 | Tokyo, Japan

- Directly Collaborated with three major clients to develop and deliver custom web applications, providing tailored solutions for their unique business needs.
- Developed and maintained a web application for one of Japan's largest dating platforms, supporting over 12,500 users, and optimized backend processes to improve user experience.
- Built a survey platform for the world's second-largest sports festival, handling data for 11,400+ athletes, and ensuring compliance with competition regulations using Java and Spring Boot.
- Created an e-commerce application for a Japanese toy company from scratch, integrating Stripe for secure payments, achieving an initial monthly revenue of over 200,000 yen.

Technologies: JavaScript, PHP, Java, Laravel, Spring Boot, HTML, CSS, jQuery

Full Stack Developer, Soft Hyperion

May 2016 - Jan 2018 | Tokyo, Japan

- Conducted automated testing for international money transfer systems used by over 10 million customers for a major Japanese bank, ensuring reliable and secure transactions with JUnit.
- Developed frontend and backend components for an e-commerce platform for a precious metals company, using Java, Spring Boot, HTML, CSS, and jQuery to create a seamless shopping experience.

Technologies: Java, Spring Boot, HTML, CSS, jQuery, Oracle Database, PostgreSQL, JUnit
